# We make cities responsive.

Numina delivers real-time activity data to

**plan more equitable & efficient streets,**

**trigger on-demand services,** and

**A/B test the built environment.**

What you see...

# What Numina sees...

12+ pedestrians

1 bicyclist

1 wheelchair

1 delivery truck

#5L Fulton Ltd bus

#71 Haight / Noriega bus

2 utility vehicles

2 green lights

# What Numina sees...

**12+ pedestrians** 4+ at bus stop  
1 at SE corner

**1 bicyclist** in bike lane

**1 wheelchair**

**1 delivery truck** parked

**#5L Fulton Ltd bus** southbound

**#71 Haight / Noriega bus** southbound at stop

**2 utility vehicles** parked

**2 green lights**

# What Numina sees...

**12+ pedestrians** 4+ at bus stop boarding

1 at SE corner waiting

**1 bicyclist** in bike lane 12mph

**1 wheelchair**

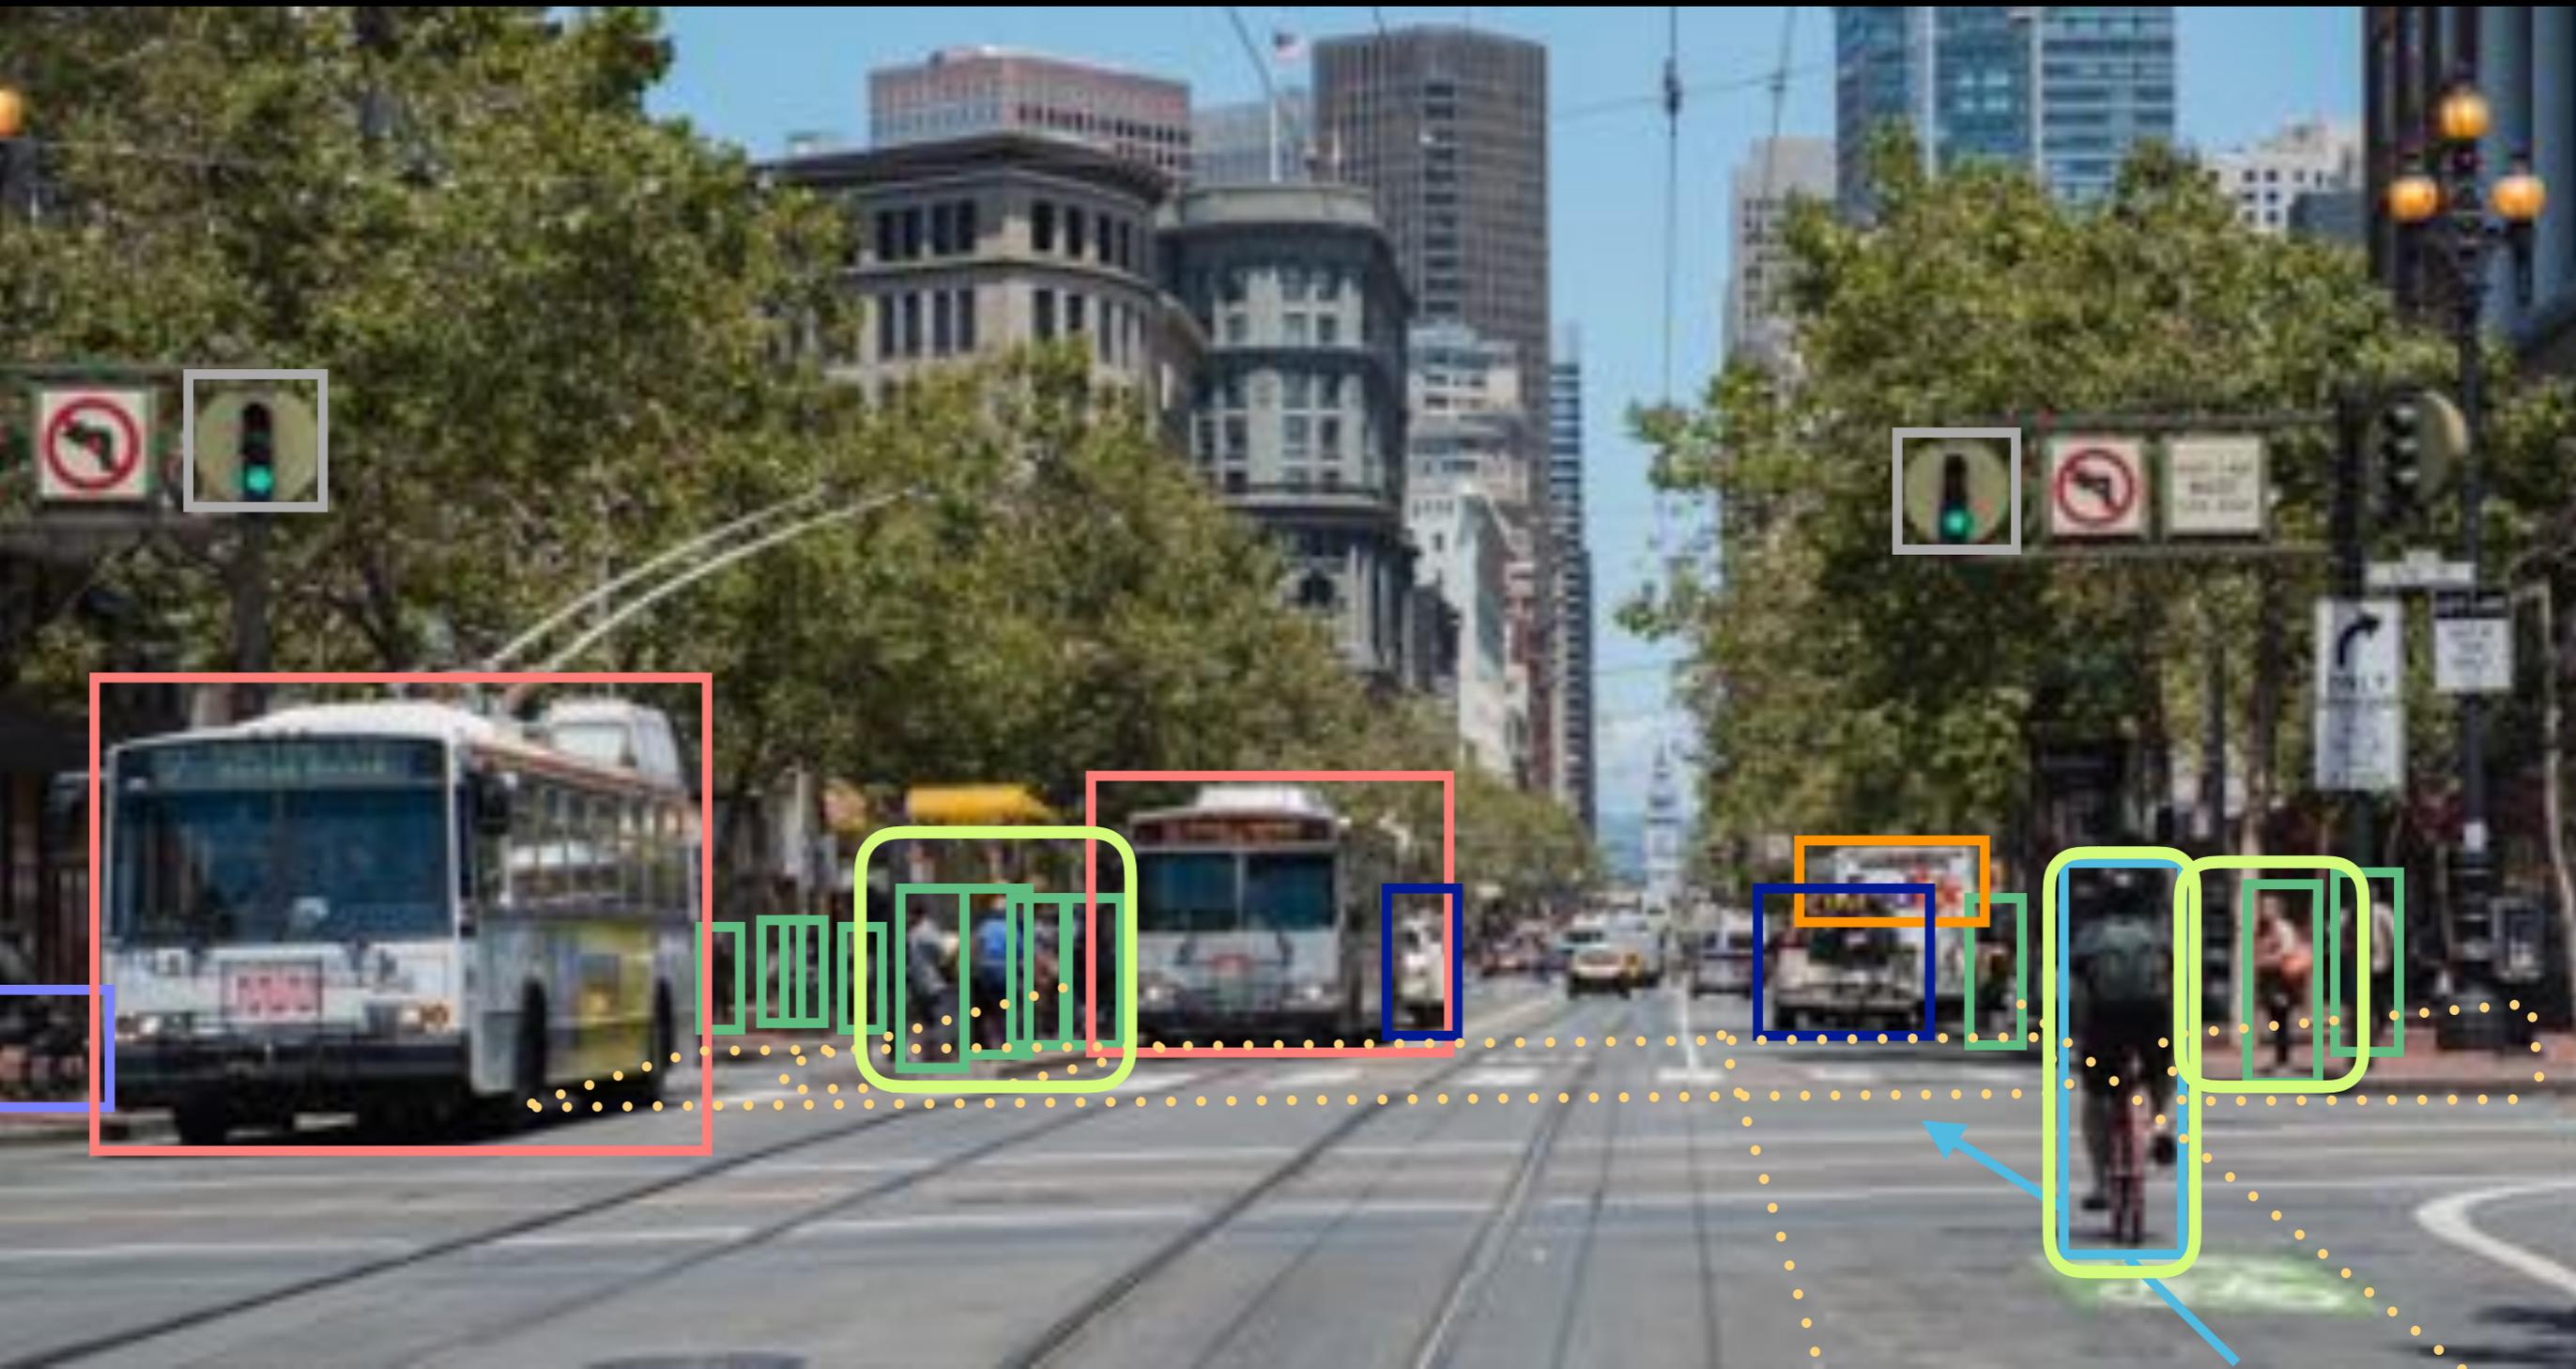

**1 delivery truck** parked

**#5L Fulton Ltd bus** southbound

**#71 Haight / Noriega bus** southbound at stop

**2 utility vehicles** parked

**2 green lights**

NUMINA'S UNIQUE FEATURES

**Pop up anywhere**

**Process data on-board**

**Measure *anything you can see***

## Urban Innovation checklist

- Clearly defined problem; buy-in for chosen solution
- Invested stakeholder organizations
  - Internal champions and project owners
- Interdepartmental collaboration
  - Good communication tools & protocols
- KPIs and definition for project “success”
- Plan for long-term expansion or sustainability
- Patience, Passion, Persistence

# 1. **Baseline bike/ped data**

to prioritize intersection safety based on usage

- ▶ The City does not have basic info on street usage.
- ▶ Numina data will help them identify highest-impact sites for redesign.

# 2. **A/B test redesigns**

using tactical urbanism approaches to infrastructure

- ▶ Compare interventions using a tactical urbanism approach.
- ▶ Deploy “pop-up” infrastructure to vet investment opportunities.

# 3. **Assess permanent interventions**

for long-term awareness of impact and responsiveness

- ▶ Report whether or not chosen infrastructure has intended effect.
- ▶ Empower the City to iterate on improvements on an ongoing basis.

## Heat Maps

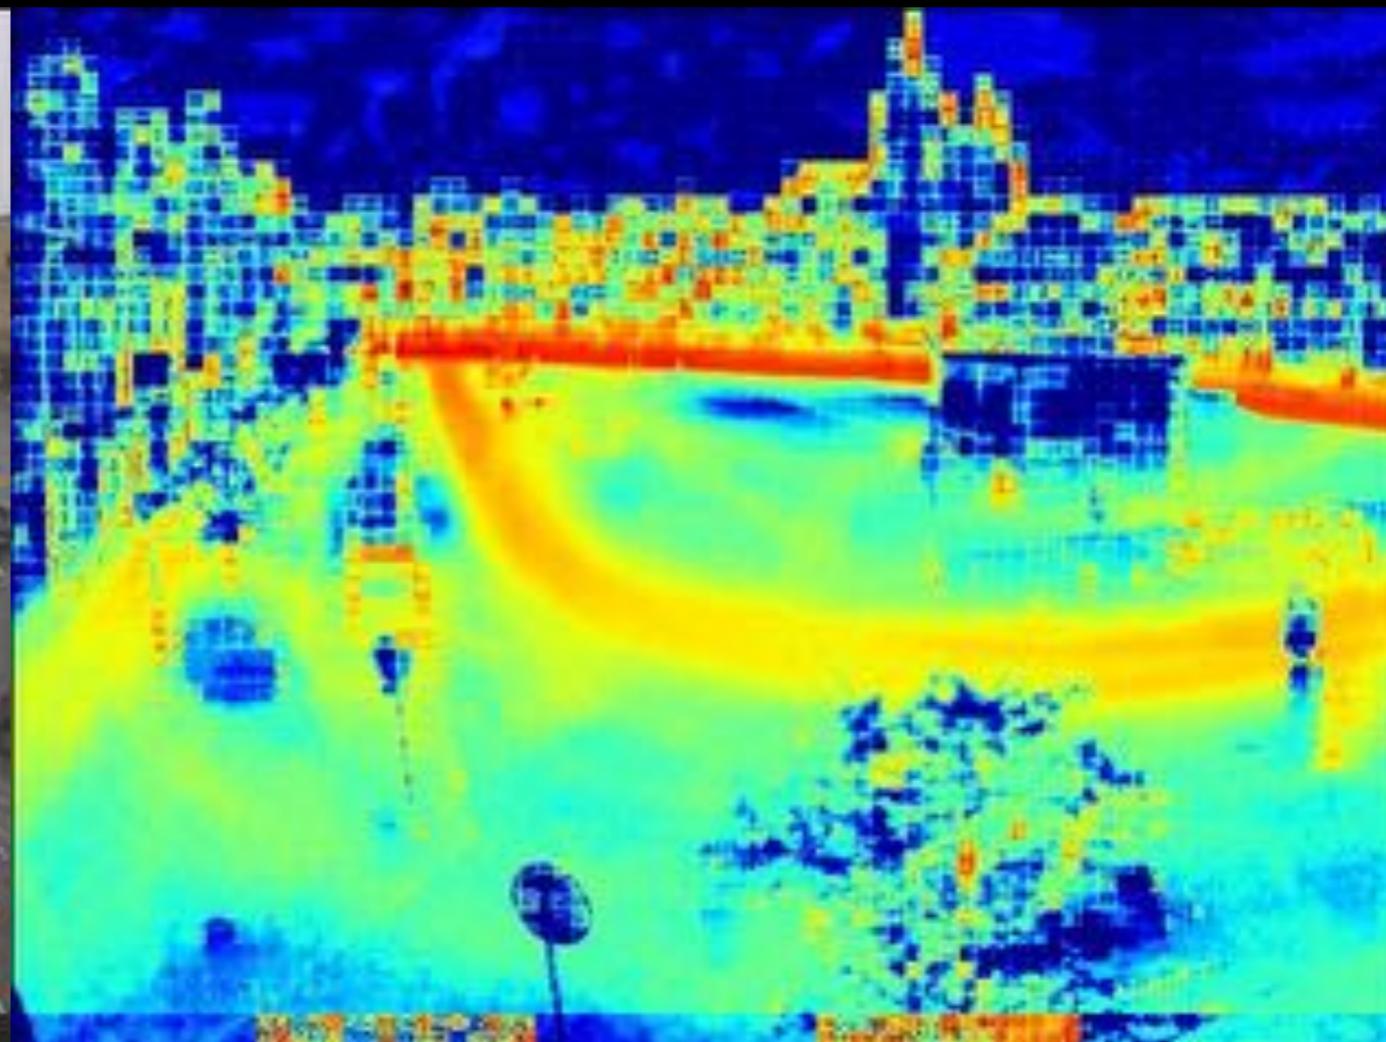

Object behaviors,  
not just counts

# LOST

## Welcome to The Longterm Observation of Scenes with Tracks Dataset

The LOST Dataset comprises videos taken from streaming outdoor webcams, capturing the same half hour each day. Data collection started in June of 2010 and continues to this day. LOST contains rich metadata, including geolocation, object detections, and tracking results.

To date, we have captured 16,009 videos, for a total of 155,029,134 frames and 727 Gb of compressed video data. Watching it all would take over 258 days, 2 hours, and 24 minutes. Processing this data has given us 434,046,047 object detections and 1,243,475 tracks.

Who we are

Tara Pham  
CEO

Martin McGreal  
CTO

## Our founders

- + have worked together since 2014, after both were hit by vehicles while riding their bikes
- + won a \$50k hackathon
- + bootstrapped the development of a computer-vision sensor deployed in major cities!

## urban design

public health + urban planning  
Next City Vanguard

+

## machine learning

machine learning, DevOps, + security  
18 years in Fortune 100 innovation offices

## Team

Paul de Konkoly Thege  
**Operations**  
previously **Boeing Ventures,**  
**Venture for America**

Zach Teed  
**Computer Vision**  
previously **Sandia National Labs**

Dean Di Pietro  
**Hardware**  
previously **OXO,**  
23 yrs. in product design

## Who's with us

### Advisors

Robert Pless, PhD  
George Washington University  
Chair of Computer Science,  
Computer vision expert

Frank Vallese, PhD  
ePhysics Technologies  
CEO for 25 years,  
EE & sensor expert
